

Shared song implementation

Project idea.

Wanna share a lovely song with your friend while drinking your favorite coffee?

Just click on 'Share Your Song' and a current playing song will be instantly send to your friend moki cup as a QR code containing an url to iTunes of this song. Nice wishes in every message:)

How to run.

1. Install app on your iPhone.
2. Launch the song you like.
3. Click on 'Share Your Song' with your best friend.
4. Make your friend happy.

Perspectives.

Using QR codes you have an excellent opportunity to share whatever information you wish, so you shouldn't stop only on sharing music, it is also possible to send texts, movies, GPS coordinates, etc.

Testing problems.

Songs containing non ascii characters or spaces in name of an artist or name of a song will not be recognized as url due to some implementation issues.

Results.
